Project Presentation
RIOT im Internet of Things, Milestone 1

github.com/rosetree

5. Oktober 2019

I've worked on

- the RIOT Tutorials on Github
- controlling a LED with saul & gcoap
- native build environment on Linux (Debian)

I'm working on: the `saul_coap` pkg

Goal Provide an CoAP interface for all saul devices & values connected to a board.

Code github.com/rosetree/riot-saul-coap

I'm working on: the `saul_coap` pkg

Goal Provide an CoAP interface for all saul devices & values
connected to a board.

Code github.com/rosetree/riot-saul-coap

☒ /saul/cnt replies with number of connected devices

☒ /saul/dev replies with device info

☐ /saul/val (?) replies with device values

☐ /saul/set (?) replies with device values

Challenges

- In this Project: what's the plan?

Challenges

- In this Project: what's the plan?
- With RIOT: where's the reference?

Challenges

- ▶ In this Project: what's the plan?
- ▶ With RIOT: where's the reference?
- ▶ String & memory handling in C
- ▶ REST-ish resources are hard to implement
    - ▶ with C, RIOT, gcoap or
    - ▶ in the IoT
- ▶ CoAP response data payload feels tiny
- ▶ Computer freezes occasionally and needs hard reboot
